

# Quarto Basics

For a demonstration of a line plot on a polar axis, see Figure 1.

Code taken from: <https://quarto.org/docs/get-started/hello/text-editor.html>

```
import numpy as np
import matplotlib.pyplot as plt

print("This is some arbitrary sentence.")

r = np.arange(0, 2, 0.01)
theta = 2 * np.pi * r
fig, ax = plt.subplots(
    subplot_kw = {'projection': 'polar'}
)
ax.plot(theta, r)
ax.set_rticks([0.5, 1, 1.5, 2])
ax.grid(True)
plt.show()
```

This is some arbitrary sentence.
